

LINER-LINER INTERFACE PROSTHETIC SOCK AND A/K BRIM SHEATH

Liner-Liner®

LINER-LINER® PROSTHETIC SOCK WITH X-STATIC®

A prosthetic sock designed to be worn under a suspension liner next to the skin. Relieves skin shear irritations and improves comfort with liners. Tested and proven beneficial for amputees who wear liners as the primary interface. Ultra-thin material minimizes compromise to liner's suction grip on skin. X-STATIC silver fibers to inhibit odor in the sock; transport heat and moisture away from the limb. Washable interface keeps liner cleaner and helps control skin irritations. High stretch for excellent fitting qualities; fewer sizes required to fit most wearers. 5.8% Lycra® spandex, 94.2% polyester/X-STATIC (5%)

Note to prosthetists: Due to the sheerness of sock material, liner suspension should not be affected; however, suspension should be examined and verified for each wearer. Advise and select candidates accordingly.

4. Rinse thoroughly.

A/K BRIM SHEATH

For above knee patients, for all socket styles. A special sheath designed to separate and protect the soft tissue in the top brim of the socket. Used to bridge the gap between the top edge of any roll on liner and the groin. Will work on pin suspension and seal in liners.

Brim sheath uses stretchy, slick nylon material, constructed in two angled sections to allow the fabric design to fit the high lateral and lower medial shape appropriately. Includes gripper elastic to secure to outer socket. Suggested billing, L8410, Prosthetic Sheath, AK each.
